

This is a compilation of a small selection of screenshots which was taken from a recently created Facebook Group. The group was created as a place where family folks and family members could report their injuries and those of their family members following the CV injection.

The FB group rapidly grew to more than 127,000 members in just around 3 weeks and was still growing rapidly before FB removed the group. You may be aware that the big tech companies like Facebook, Twitter and Google have been heavily censoring factual information which goes against the Agenda (especially from the medical community) in order to prevent the truth from reaching the people.

Luckily I had decided to grab a range of screenshots just days before FB deleted that group. The screenshots I'm sharing below are just a small selection of those that I had taken.

A fortnight ago I lost a close friend, after I'd found out she was found at the bottom of her stairs, it turned out she had a brain hemorrhage and spontaneous bleeding on the brain, she died instantly, she was only 57 and she was fit and healthy. After speaking to a family friend who stated she'd previously spoke to her, she'd had the vaccine two days before died, when she spoke to her she was complaining about these very violent headaches that wouldn't shift, she never suffered from headaches. Then to find out two days later this happened to her, it's so sad I miss her so much. This is more than just a coincidence and definitely think it has something to do with the vaccine 📌

My uncle had the AstraZeneca shot. He was 65, he was a strong men, Chief of the Fire department in Amealco, Mexico. He started with chills, headache and then all the covid symptoms but they where really really strong, as if magnified... and passed away the 5th March 2021. The strange thing was that 7 other people that got vaccinated with him that day died too.

Has anybody experienced lumps in their breasts after the vaxevria/astrazenica shot? my 27 year old daughter had her first shot a week ago, now she's waiting on an appointment at the breast cancer clinic to find out what's going on, I can't help thinking it's connected. 😞 Edit: sorry I forgot to say that we're in the uk and my daughter has no underlying health conditions.

My partner became ill 5 days after his Covid vaccine, 111 suggested a test which was negative, 7 days after the vaccine I called an ambulance as Jim said his chest felt tight, they spent nearly 2 hours checking him over and said they believed it was a reaction to the vaccine and they had seen worse, but would get to the out of hours doc to ring in the morning. By the next morning his legs would not do what he wanted them to, his breathing was bad, so when the doc called I told him he needed to see Jim, he didn't want to, no testing equipment was the reason and... I have posted similar previously on another Facebook covid group but they instantly banned me from commenting. On the 23rd of February my twin brother George Clegg who was only 55 and healthy without any serious underlying conditions died from a huge blood clot on his lungs. I completely believe this was caused by the Astrazeneca jab, it has destroyed me our family and his partner, no way on this earth a big healthy strong man just died I need to know why they didn't make him aware of the rare side effects as I know for certain he would not have had the jab with clotting as a possible side effect. I loved my twin brother more than my own life and would happily change places with him he was a great man, and as far as I am concerned they have taken him away from me our family of mum and 3 brothers also his partner. I am a gentle quiet man who has never hurt anyone in my life but the anger and vengeful feelings at losing half of me and my best friend are off the scale.

Hi all! Thank you for the add! Thankfully, I haven't lost anyone due to the vaccine but, my mom got both Moderna shots and was soooo sick. She was hospitalized 4 days later with blood clots in her lungs. They say there isn't a correlation but I believe there is. My sister passed away February 2020. She was cremated, never tested and marked as a Covid death. My mom and I both had bloodwork to see if we were high risk for clots because she had a clot in her brain. We both came back with results saying we weren't at an elevated risk for clots. After being severely ill for... See more

My fiancé's grandma who was 88 but was in good health received the Pfizer or Moderna but I believe it was Moderna the end of February. 3 days later she had a massive stroke that completely paralyzed her left side. A few days after the stroke, they were told she wouldn't make it. She received her 2nd shot 5 days prior to passing away on April 4th. The family discussed the fact she was vaccinated 3 days before the shot. I don't think any of them think the stroke is related to the shot.

My fit, healthy and extremely active 64 year old mum had the pfizer vaccination on the 19th Feb at 3.50pm and had a heart attack less than 12 hours later. She had no underlying health issues and had recently had a health check with the GP which she was so proud to have walked out of there perfectly healthy no concerns at all. I have not yet heard back from yellow card despite myself and the ICU consultant reporting it. Anyone who knew my Mum knows this should not have happened to her. There is an inquest into her death to look at the timeline of events of which the coroner agrees the vaccine is relevant to. ❤️🙏

My husbands neck 2 days after the astrazeneca 1st jab. So the day after the jab he felt shivery headache weak arm ache and that night he noticed a fewstok rashes on his chest by the 2nd day after his whole chest was like this and then even after anti histamine and creams it started to gettin worse up to his neck and this pic is his neck area so now he has steriod but the side affects are terrible so i have bought him vitamin D3 zinc and we have been taken vitamin c for years so hopefully using the rest might help him . We have always ate the same foods from the same shops and never changed washing powders or liquids . We know 100% its a reaction to the jab and we will not be having another jab because of our concerns as it is still in trials

Hey thank you so much for accepting me into the group...

My mum died on the 21st of February 2021 at just 43 years old just under a month after she had the first dose of the astraveneca jab 😞
We are still awaiting the postmortem results as my mum has to undergo further testing which can take 3 months. They suspect something was on her lungs but have too dig further into it 😞
Since having the vaccine, my mum suffered many of strange effects, firstly it was constant headaches, not eating much, then she was having cold sensations in her hand, feet and nose too which the doctors assumed it was raynauds disease which she was being investigated for. Her mental health also seemed alot worse, she was having trouble sleeping too.
5 days before she died she was having really bad chest pains, I told her too go hospital but she rang gp instead, they gave her an ecg then said everything is fine and not too go too hospital 😞😞

I strongly believe it was the vaccine, my mum was fit and healthy, had no health conditions... She was absolutely petrified of getting the jab in first place but did it for the sake of the people she looked after 😞

He was my best buddy, and I will never get over how we lost him.

My sympathies to everyone else who has suffered loss and/or injury due to this vaccine.

Katy Mac 5 Apr · 🌐

Thankyou for having me, my mum received the vaccine against our wishes but went ahead, i monitored her from the first day and she deteriorated rapidly she passed 4 weeks later she was fine before.

I'm here after telling my story and a fee few people had suggested I join your group.

I had received a call from my dr to book my covid vaccine appointment. I attended this appointment on the 16th of February. I was asked if I was pregnant. To which I replied yes. They went and found a dr who was on site and she explained that she had to make it clear that there hasn't been enough tests on pregnant mothers to be sure of the risks.. however she did say she wouldn't think the vaccine would reach the baby.

I went home, I had a headaches and a sore arm ... I wasn't too concerned, 5 days later on the 21st of feb .. I woke to blood just pouring out of me, I was hemorrhaging and I lost 4 pints of blood as well as my baby at 17 weeks.

When the paramedics arrived I had mentioned that I had had the Pfizer vaccine and could that have caused this. He was quite adamant that it wouldnt have done,he praised the vaccine as he had recently received it himself.

I have not voiced my concerns since I feel maybe I won't be heard. But it may be coincidental, but given the timing of my loss. I cant help but wonder if this was caused by the Pfizer vaccine.

This is a reaction post, thank you for letting me join.

Does anyone have visual problems and headache over a month later?

I had my Astra Zeneca jab on the 25th of Feb. I had a strong reaction with headache, sore throat, etc. After a week my headache never went but calmed. That said, I continued to have some fuzzy head feeling and then started getting a more of a consistent migraine feeling, rib pain (1... See more

Ravinder Walia shared her first post. 5 d · 📷

My Aunt , 58 years old had the vaccine in India, probably the Astra Zeneca vaccine. Complained of diarrhoea and feeling sick , the Dr was called but did not come because of COVID. She lay down, the next morning , she passed away . Her only issue was a slightly elevated blood pressure . He husband 71 years old, my uncle lips were swollen after the vaccine. This death was 100 % due to the vaccine . No autopsy , the body was cremated within 3 days . Waheguru 🙏🙏🙏

I'm also in the UK....I know someone who now has either lupus or fibromyalgia after the vaccine, the Drs are trying to figure it out

A friend passed me onto this group. Here we go. My brother Mike 68 years old had his vaccine on the 12th feb 2021 (Astra zeneca). He was dead by 12th March. He had his flu jab a few weeks before. Understand that he was vulnerable, he had type 2

My mum was taking to hospital can't walk and in a lot of pain in her back and legs and my friend was rushed to hospital with blood clots in his lungs.

Sharing true events what has happened to my mum and friend before people say it is fake. Xx

COVID19 VACCINE VICTI... Q

Tashia Owen shared her first post. 4 d · 📷

Hello everyone, I'll just do a quick introduction. My name is Tashia, I'm a happily married momma of 4 and Abbi (grandma) to 3 boys. I'm also a naturalist. My family and I don't believe in vac-cines or anything that our common sense tells us to stay away from, which would be this so-called COvid vac-cine, or science experiment. We've heard of 4 deaths in our county so far that we know personally that have died quickly after vac-cination. My son-in-law's uncle, who was in decent health for his age (late 60s), after receiving his 1st shot almost immediately felt sick, light-headed, headache, nausea, etc. He went home to get some rest with having to go to the ER for feeling much much worse that evening. The medical professionals didn't seem concerned in the least bit, told him to go home, take some ibuprofen, and follow up with primary care physician the next day. He went home and passed away hours later. This is happening everywhere, but of course it's being hushed. It's wrong! This should have never been allowed to happen. This type of vaccine has NEVER been successful in the past.

COVID19 VACCINE VICTI... Q

It was the media that frightened him to death. I told him not to have the jab, but on the 12th feb he went for it, unbeknown to me. He came into my cafe on the 12th. A few days later he started with a cold. It got worse my sister phoned for paras, they came and did the vitals on him and they said he was well. So he said I went go in then. But a week later he had deteriorated so much that my sister phoned again 111, (dont phone this number) phone 999. Eventually they came took one look at him and took him in hosp, he went straight to a covid ward. He was in there 2 weeks 2 days, he had his 69th birthday in there. His last txt to me was, I dont think I'm going to make it 😞😞😞. When he first went in, the staff were positive, then suddenly palliative care nurses were called. He knew he was going to die. He was so dependent on the oxygen that once it was turned off it was inevitable. They upped the morphine and he then died. We were so lucky because my brother asked me to take his shoes in for him. Me and my sisters went to hosp together. When the staff nurse saw us all stood there heartbroken not being able to see him, she said I will go tell Mike you are all here and ask him if you can see him. We were invited in, we had to get suited and booted and we sat in with him from 5.00pm right through to the next day and at 5.40pm he died. During that time we played his favourite music, tamia mowtown, sang to him, held his hands and stroked his head and told him how much we loved him. I believe if Mike hadnt had this jab he would still be here with us now. He had

My 81 year old Dad had the Pfzier vax in December. He got double vision on day 4. An MRI and CT scan showed nothing wrong and a fit and healthy man (full body MRI). They said it 'may' be palsy but never mentioned the vax. 21 days later he had the 2nd Pfzier vax, he still had the double vision. On Day 4 of the second one he woke unable to breath. Rushed to hospital, ventilated on arrival and sedated. We got called to the hospital on day 8 to say our goodbyes as they said his heart was totally destroyed and wanted to turn the ventilator off. We gave permission and he died on... See more

Peter Clegg 1 Apr · 📷

I have posted similar previously on another Facebook covid group but they instantly banned me from commenting ,On the 23rd of February my twin brother George Clegg who was only 55 and healthy without any serious underlying conditions died from a huge blood clot on his lungs ,I completely believe this was caused by the Astrazeneca jab ,it has destroyed me our family and his partner ,no way on this earth a big healthy strong man just died I need to know why they didn't make him aware of the rare side effects as I know for certain he would not have had the jab with clotting as a possible side effect, I loved my twin brother more than my own life and would happily change places with him he was a great man ,and as far as I am concerned they have taken him away from me our family of mum and 3 brothers also his partner

I am a gentle quiet man who has never hurt anyone in my life but the anger and vengeful feelings at losing half of me and my best friend are off the scale .
